Description

The building work comprises 4 new classrooms and a dedicated performing arts classroom. Ancillary to the main works are cleaners rooms, toilets and a new plant room.

The building is a contemporary design based around a steel frame with multiple cladding elements providing the building envelope. These include a central full length roof light system, a standing seam aluminium composite roof to one half with a membrane flat roof to the other. The walls are a mixture of glazing, coloured render, larch cladding and a feature wall of ibstock block. Internally the build is a mixture of masonry and studwork to provide a suitably robust finish for the end users.

Value

£500k

Contract Period

21 weeks August 09 - January 10
