## Description

Following the destruction of the original school by fire, Pochins were appointed to carry out the building of the junior school on the site of the previous school. Predominately a single storey building the new school included an assembly hall, classrooms, toilets and staff areas together with the forming of hard and soft play areas. Load-bearing block-work was used externally to support a timber roof which was finished with Welsh Slate. Under-floor heating was used throughout the building. Roof lights were incorporated within many areas to provide natural light and were also linked into a control system to provide natural ventilation.

## Value

C £1,000,000

## Contract Period
