

Holyhead Marina

Description

New build construction of four 4 storey luxury apartment blocks, including eighteen 2 and 3 bedroom apartments and eight penthouses at Holyhead Marina. The ground floor contains retail units and wash rooms for the Marina. This was a steel frame construction with pre-cast concrete floors and m.f. partitioning. External Metsec Steel Walling system was used with Stoe Rensch Boarding. The Penthouse apartments have a copper roof with overhanging eaves. Due to the location of the contract, the elements caused a number of problems and each side of the building was specifically designed to cope with the changing weather and still enjoy the views.
